

Job Title: System Programmer

Location: London

Role Overview

The main role is to take full responsibility for the project programming and GUI requirements and to ensure that all programming functions are completed in a timely, efficient manner and to the client's satisfaction.

Key Responsibilities

- > To develop control software and touch panel designs for projects assigned to you by the Programming Manager
- > Read system schematics and consultants specifications / briefs before commencing work
- > Work alongside other departments to ensure that the design, equipment and control software will all meet the project specification
- > Attend site meetings with the client/consultant to discuss the programming, touch panel designs and networking requirements
- > Work alongside other proAV® programmers and as part of the team will be expected to assist your colleagues when required
- > All systems are tested in the proAV production facility before going to site and a witness test with the consultant/client is standard practice, which you will be expected to attend
- > Work with the programming team in the transition from Simpl Windows to Simpl#
- > Work alongside the Project Manager on site to ensure that the project is completed to a high standard and in accordance with the specification.
- > Be involved in the project delivery including off-site test and commissioning, ensuring all relevant documentation and departments are aligned
- > To perform other activities and responsibilities as directed by the immediate manager.

Additional Skills

- > Skilled in Crestron Simpl Windows programming to P301 / Masters level
- > Experience with Crestron Fusion
- > Other experience with AMX (SVSI), Extron programming an advantage
- > Ability to interface well with clients and co-workers
- > Excellent written and verbal communication skills
- > Some working knowledge/understanding of C# & HTML.
