

neat.frame

A beautiful way to meet.

Neat Frame is a first of its kind portrait-oriented all-in-one video device for Microsoft Teams that fits anywhere. This is purposefully designed to cater for the multiple new workstyles and spaces companies and employees are now adopting.

It's a super convenient touch screen device not only attractive as a personal productivity device for working from home or any office, but also hot desking, jump rooms, retail environments or as a virtual receptionist and all manner of other new and exciting applications.

neat.

Space-saving device.

Neat Frame's incredibly simple to set up and use, offers superior audio-visual quality and frees up your laptop or desktop computer for work, making meetings feel like less of a juggle between talking, listening and shuffling windows of various content. In other words, it declutters your PC layout, as well as your desk or similar work surfaces.

Better still, Neat Frame has all the functionality of large-scale corporate solutions, yet its relatively small footprint takes up little space. In addition, a subtly integrated handle at the back enables you to easily move Neat Frame from room to room, depending on your individual needs or preferences.

Look, feel and be at your best.

With its perfectly placed high-resolution wide-angle camera, Neat Frame allows for direct eye-level communication for more natural and immersive interaction. Besides that, its bright digital display provides crystal clear imagery in a wide variety of settings, so you can rest assured the device will always present you and others in beautiful and elaborate detail. As a result, Neat Frame offers you the opportunity to always look, feel and be at your best, however or wherever you choose to meet or interact. At the same time, it gives you an optimized layout of people and content with touch control, bringing both to the forefront by filling more of the screen and reducing any wasted black areas.

More audio, less distractions.

Neat Frame incorporates advanced audio processing that enhances human vocal pickup and removes distracting noises. These include static noises like a fan or vacuum, or other dynamic sounds like keyboard typing or a crinkling bag of chips. It also eliminates any garbled 'double-talk' issues where two people talk at once, so your conversations can flow more naturally.

Hot desk and make it your own.

When you get to the office, stop worrying about where you'll be able to sit or if you brought the right gear. With a dedicated device for Teams calling and meetings, you can sit down, sign into your personalized Teams experience and join meetings fast, which saves time and eliminates the anxiety of wondering where you'll sit during your time in the office. Make any workspace your own with Microsoft hot desking—it's a great way to stay connected and productive while giving you the flexibility to work from anywhere.

Productivity powerhouse.

A dedicated personal video device with quick and easy access to core Microsoft Teams features enables you to be a productivity powerhouse. Enjoy always-on functionality such as Calendar, Contacts, Meetings and Teams Chat that make collaborating on Microsoft Teams better than ever. Seamlessly view your OneDrive files, then instantly open them on your desktop for speedy editing. Better still, vividly share your creative ideas, thanks to Microsoft Whiteboard on the Neat Frame's interactive touchscreen.
