

Jabra GN

PanaCast VBS

Secure Collaboration for Modern Workplaces

 Built on
Microsoft Device Ecosystem Platform

Android as you know it, enhanced with Microsoft's trusted security

In 2023, Microsoft developed their own version of Android called MDEP (Microsoft Devices Ecosystem Platform), designed specifically for software and hardware partners like Jabra.

MDEP enhances the standard Android platform by adding a robust security layer and seamless integration with relevant Microsoft services. While it's developed by Microsoft, MDEP is not exclusive to Microsoft Teams and can support other UC solutions like Zoom. This ensures organizations benefit from the simplicity and flexibility of Android while meeting higher security and IT management standards from Microsoft.

Another great partnership with Microsoft to set a new standard

In 2023, Jabra deepened its partnership with Microsoft and set an ambitious goal to lead the way with MDEP by being among the first movers in this innovative space. At one point, this included an ambition to launch the first-ever MDEP-enabled device through a software update for the PanaCast 50 VBS. As we advanced, we shifted our focus toward expanding innovation across our broader Android portfolio.

This year, we're proud to deliver not one but two MDEP-based solutions: the updated PanaCast 50 VBS and the **brand-new PanaCast 40 VBS**.

Seamless, Secure, Future-Proof

Unlock the full potential of MDEP with PanaCast 40 VBS and PanaCast 50 VBS, delivering seamless, secure, future-proof solutions.
